

A Perfect Mould for Sustainability...

JRD Rubber Mouldings manufacture high quality rubber and rubber to metal bonded products, and were interested in achieving a formal environmental accreditation after a major client asked them to achieve ISO14001.

Nigel started the process by joining Business Envestors. After accessing support, Nigel realised that much of the documentation he required was already in place, which made the process easier as it was just a question of collating documents and filling in the gaps. Missing documentation was put together by modifying Business Envestor templates. In August 2008, JRD Moulding achieved ISO14001.

As an added bonus, as part of the process of putting ISO14001 in place, JRD Rubber Mouldings have made a number of cost-savings, the largest of which came about after an on-site audit provided by Business Envestors. In this audit, rubber waste was identified as a potential product for recycling instead of land-filling. Business Envestors were able to utilise their large network of contacts within the industry and found a company interested in recycling their rubber. By recycling this product, JRD Rubber Mouldings has saved approximately £1700 per annum, and have reduced their waste to landfill by 2 skips per week.

"I liked going down the route of BS8555, as it broke up the work-load into manageable chunks that were easier for me to deal with due to my busy work-load. The on-site support visits from Business Envestor consultants were especially useful, as they checked through my documentation and ensured it would meet the requirements of the standard."

Nigel Driver, Quality and Environmental Manager, JRD Moulding
